Continuous Key-Signing Party introduction

Gunnar Wolf

DebConf17, Montreal, Canada, August 2017
Web of trust anyone?

What is this used for?  
(Why the need?)

- Keyring-maint / FrontDesk / Debian infrastructure’s requirements for you
- *Web of Trust, Curated Web of Trust, Strong Set, Connected Set, ...*

ksp-dc17.txt
What is your lucky number?

It’s a drag, but it’s important.
Lets do this once! (at least)

61ff ac91 5299 1bf7 babf da53 380d 268e 4195 0201 5fbb f973 f72a f5dc e889 7252
Whom to cross-sign with?

There are really no guidelines to this. But...

- Is Foo your friend, and you haven’t cross-signed? Go ahead and get yourself signed!
- Is Bar many hops away from you? Cross-sign and you will bring more coherence to our strong set!
- Is Quux isolated or weakly connected? Bring him in by cross-signing!
- Of course... Are you very weakly connected or disconnected? Don’t be shy; cross-sign with as many people as you can.

There is no need to be at the geographic center, only to introduce as much redundancy (in the good sense) as possible.
...But my signature is not in ksp-dc17!

Tough luck :-(
But don’t worry! (and print some slips!)
What is trust? How to proceed?

- Government-issued IDs
What is trust? How to proceed?

- Government-issued IDs
- Trust-the-person
Continuous Key-Signing Party introduction

What is trust? How to proceed?

- Government-issued IDs
- Trust-the-person
- Your scheme?
That’s it!

So, let’s start greeting and cross-signing!
Any questions?
